

Supplemental material 7:

Checklist: Lead experimenter study explanation

1. Welcome the family at [lab specific content]
2. Study explanation

Once everyone is settled and comfy, explain study and method. Things to mention:

 - *Session*. Explain what we will do and in which order.
 - *Research question & task*. What are we looking at and how?
 - *Method*. What does the method entail? How does the method work?
 - *Experimental setup*:
 - Mention that the baby will be resting on a changing table-like surface, with their head resting inside the helmet.
 - Offer the parents to see the setup inside the MSR.
 - Explain that we are happy for baby to be awake or asleep. Ideally, it would be great if they could not move too much.
 - Address swaddling (*would parents be happy for baby to be swaddled?*).
3. Questions
4. Consent (*let the OPM-MEG operator when a good time to switch on the chassis*)
5. Preparation for entering the MSR
 - a. make sure that baby and parent are not wearing metal and/or addressing this
 - b. make sure that baby is happy (clean nappy, fed, content, maybe even asleep!)
 - c. ask if a good idea to play white noise while baby is settling down in the MSR
6. Preparation inside the MSR:
 - a. Instruct the parent how to position the baby on the bed
 - b. Leave the parent time to settle baby on the bed
 - c. Once the baby is settled and happy, slide the baby inside the helmet (*2 experimenters may be needed; one behind the helmet; one to operate the platform*)
 - d. Take photographs of the head positioning
 - e. Ask parent to take their position and remove glasses
7. Recording
8. After the recording
 - a. 3D scans
 - b. debrief the parent
 - c. ask for feedback
 - study and set up
 - safety
 - information prior to visit
 - d. gifts & certificates
